Office Action Summary

Application No.

09/824,887

Applicant(s)

FLIFLET, BRANDON L.

Examiner

Ryan R. Yang

Art Unit

2672

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 January 2006.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 19-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 19-36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to communications: Amendment, filed on 1/3/2006.

This action is non-final.

2. Claims 19-36 are pending in this application. Claims 19, 31 and 34 are independent claims. In the Amendment, filed on 1/3/2006, claims 19-21 and 31-34 were amended.

3. The present title of the invention is "Method and apparatus for dynamically balancing graphics workloads on a demand-based zone renderer" as filed originally.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 19-36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 19, 31 and 34 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are:

The preamble of claim 19 entails "a binner and renderer in a zone renderer", it is not clear the relationship of a "render cache" (in line 3) with the binner, renderer or a zone renderer. It is not clear of the structural relationship of a renderer cache when

“viewed” by the binner. It is also not clear the “zone renderer” (line 7) is the same zone renderer as stated in the preamble, which leaves the zone renderer in the body of the claim structurally unclear in relation with the other elements.

Claims 31 and 34 have the same problems as claim 19.

All the dependent claims are rejected because of the rejected independent claims.

Claim Rejections - 35 USC § 102

6. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

7. Claims 19, 22-26, 31 and 34 are rejected under 35 U.S.C. 102(e) as being anticipated by Arenburg et al. (US 6,191,800).

As per claim 19, Arenburg et al., hereinafter Arenburg, discloses a method to balance workloads associated with a binner and renderer in a zone renderer configuration, comprising:

configuring a size of a render cache viewed by the binner (Figure 1 where Temporary Memory 18 contains a render cache and the Processor 12 is the binner);

monitoring the binner and renderer for a predefined time period (Figure 4 where 72 monitors the binner and renderer for a time);

detecting whether there is an imbalance between the binner and renderer (Figure 4, item 74 determines the imbalance); and

in response to detecting an imbalance between the binner and the renderer, adjusting the size of a zone renderer to minimize the imbalance (Figure 4, item 78 where the size of a zone renderer is adjusted).

8. As per claim 22, Arenburg demonstrated all the elements as disclosed in the rejected claim 20, and further discloses the maximum size of the render cache viewed by the binner is equal or approximately equal to an associated display size (Equation 8 where the mazimum weighting factor is 1 which is the size of the display).

9. As per claim 23, Arenburg demonstrated all the elements as disclosed in the rejected claim 21, and further discloses wherein the minimum size of the render cache viewed by the binner is equal or approximately equal to the size of the render cache in the renderer (an approximate solution may be employed by first using Eq. 5 to obtain the initial unconstrained solution. If a tile is found with an area less than A-minimum, then this tile area is set to A-Minimum", column 6, line 22-25).

10. As per claim 24, Arenburg demonstrated all the elements as disclosed in the rejected claim 19, and further discloses monitoring the binner and renderer for a predefined period comprises:

polling the renderer for a predefined number of cycles ("Each tile is updated one frame, and the various times that it takes for each tile to be rendered are measured", column 6, line 65-67, where one frame is a plurality of cycles).

11. As per claim 25, Arenburg demonstrated all the elements as disclosed in the rejected claim 19, and further discloses wherein monitoring the binner and renderer for a predefined period comprises:

determining an execution time for the binner associated with rendering at least one object in relation to total processing time ($t(i)$ of Eq. 3 is rendering time for one object and the total processing time is $t(1) + \dots + t(n)$, column 5).

12. As per claim 26, Arenburg demonstrated all the elements as disclosed in the rejected claim 19.

As for “maintaining graphics rendering state variables within each zone to minimize imbalances between the binner and renderer”, since the area under consideration include bottle, cork and bubbles which are state variables relating to color and geometry attributes, it is inherent that the state variables imbalance between the binner and renderer are minimized.

13. As per claim 31, it claims a machine readable medium having stored therein a plurality of machine readable instructions executable by a processor with limitations similar to claim 19, therefore is similarly rejected as claim 19.

14. As per claims 34, Arenburg discloses an apparatus for rendering at least one graphics object into an image comprising:

a memory region (Figure 1, item 18);

a rendering engine (Figure 1, item 12); and

the rest of limitations similar to claim 19, therefore is similarly rejected as claim 19.

Claim Rejections - 35 USC § 103

15. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Art Unit: 2672

16. Claims 20-21 and 32-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arenburg et al.

As per claims 20-21, Arenburg demonstrated all the elements as disclosed in the rejected claim 19.

As for in response to detecting an imbalance between the binner and the renderer, adjusting the size of a zone renderer to minimize the imbalance further comprises: increasing or decreasing the size of the zone renderer in response to an imbalance substantially caused by the binner, since it is notoriously well known in the art (Official Notice) that adjusting a size includes increasing or decreasing the size, it would have been obvious to one of ordinary skill in the art to consider both options in order to obtain a size

14. As per claims 32 and 33, Arenburg demonstrated all the elements as disclosed in the rejected claim 31, and since their limitations are similar to claims 20 and 21 respectively, therefore are similarly rejected as claims 20 and 21 respectively.

Response to Arguments

15. Applicant's arguments filed 1/3/2006 have been fully considered but they are not persuasive. The structural relationship of the renderer elements is still not clear.

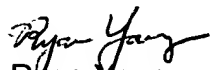

Inquiries

16. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ryan R Yang whose telephone number is (571) 272-7666. The examiner can normally be reached on M-F 8:30AM-5:00PM.

Art Unit: 2672

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Razavi can be reached on (571) 272-7664. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
